

HABIBA ADAM SALISU

Software Engineer • AWS Certified Solutions Architect – Associate • Accra, Ghana

habibaadamsalisu@gmail.com • +233 507 126 659 • github.com/habibaadam • habiba-adam-portfolio.netlify.app

PROFESSIONAL SUMMARY

Software Engineer(Backend-focused) with hands-on experience building RESTful APIs with Python/FastAPI and Node.js/NestJS, managing PostgreSQL and MongoDB databases, and deploying scalable infrastructure on AWS. Comfortable with Docker, asynchronous patterns, and integrating backend systems with front-end layers. Experienced working in cross-functional teams and delivering secure, production-ready solutions.

TECHNICAL SKILLS

Backend:	Python, FastAPI, Node.js, TypeScript, NestJS, Express.js — RESTful API design & OOP patterns
Databases:	PostgreSQL, MySQL, MongoDB — schema design, query optimisation, indexing
Cloud / AWS:	EC2, S3, Lambda, ALB, Route 53, CloudFormation, GuardDuty, IAM, Auto Scaling (AWS Certified)
DevOps:	Docker, Nginx, Terraform (HCL), GitHub Actions
Auth & Security:	JWT, Auth0, RBAC, session-based auth, Helmet, input sanitisation
Frontend:	React.js, Next.js, JavaScript, Tailwind CSS — sufficient for seamless backend integration
Tools:	Git, GitHub, Postman, Trello

WORK EXPERIENCE

Backend Developer • *SimmyFranks (early-stage ecommerce platform, contract)* Jul 2025 – Present | Remote

- Designed and owned a scalable Node.js + TypeScript backend integrated with a Next.js 15 frontend, following modular service-layer architecture for long-term maintainability.
- Implemented RBAC and session-based authentication (inspired by LuciaAuth), securing all API endpoints and reducing unauthorised access surface.
- Optimised MongoDB schemas and compound indexing strategies, cutting average query latency from ~800ms to ~300ms under load (62% improvement).
- Built a Redis-backed unique view tracking system using IP + User-Agent hashing with TTL-based deduplication, reducing redundant DB writes.
- Implemented cron-driven scheduled publishing pipelines for automated content state transitions (draft → scheduled → published).

Full-Stack Developer • *PhishFortress (freelance, cybersecurity training SaaS)* Mar 2025 – Jun 2025 | Remote

- Built RESTful backend APIs with Python + FastAPI for a phishing simulation and security awareness training platform.
- Integrated Auth0 with RBAC and the YouTube API for tracked content delivery, demonstrating proficiency with third-party service integration.
- Developed adaptive backend logic that personalised training recommendations based on user behaviour, reducing repeat phishing click-through rates by 20% across test participants.

Backend Developer • *Faithful-Match (contract, matchmaking platform)* Feb 2025 – May 2025 | Remote

- Built NestJS backend services with MongoDB, designed to support 100+ concurrent user profiles with low-latency interactions.
- Architected a matchmaking algorithm using weighted scoring and Jaccard similarity, improving match accuracy by 15% in beta testing.
- Optimised database queries and index strategies, reducing average response times from ~1.2s to ~400ms (67% improvement).

Backend Developer • *TechX360 (contract, mobile e-commerce)* Jul 2024 – Aug 2024 | Remote

- Built core backend services — authentication, orders, and payments — for a mobile e-commerce app using NestJS and MySQL.
- Secured APIs with role-based access control and improved caching with Redis, cutting average checkout latency by 40%.

Full-Stack Engineer Intern • *OptimaData* Jun 2024 – Jul 2024 | Remote

- Built REST APIs using Express.js with Helmet, input sanitisation, and structured logging (Morgan); contributed to React + Tailwind CSS frontend features.
- Collaborated across frontend and backend teams using Git and Jira throughout the development lifecycle.

NOTABLE PROJECTS

Serverless Translation Pipeline on AWS — Terraform · AWS Lambda · S3 · AWS Translate · Python (Boto3)

- Built a serverless NLP pipeline for automated text translation triggered by S3 object events; infrastructure fully defined and deployed via Terraform with custom IAM roles and S3 lifecycle policies.

Threat Detection with AWS GuardDuty — CloudFormation · EC2 · S3 · ALB · Docker

- Deployed a full VPC (ALB, Auto Scaling, IAM, S3) via CloudFormation; simulated real-world attacks (SQL injection, credential misuse, data exfiltration) to validate GuardDuty detection coverage — surfaced 10+ findings. Relevant given role's cybersecurity focus.

EDUCATION & CERTIFICATIONS

AWS Certified Security – Specialty Jun 2026

Credential ID: aa40ae1d-6a24-481d-8acf-47f72bbe3545

AWS Certified Solutions Architect – Associate Sep 2025

Credential ID: 418b15a6173348e7aaede9b5a6b2314a

Cloud Computing — Azubi Africa Mar 2025 – Sep 2025

Software Engineering — ALX / Holberton School of Coding Mar 2022 – Jun 2024

Specialisation: Backend Development (Jun 2024)

SheCodes — Basics, Plus, Responsive, React Oct 2023 – Feb 2024
